

# PET SHIPPER VISIBILITY SOLUTIONS

*Enable your clients with the insight of how their pet is handled throughout the duration of their trip. From your door to their final destination (and everything in between), give them the peace of mind they deserve.*

Moving or traveling with a pet via air travel can be stressful for the owners. Empower them with the insight and visibility on their pet's location and local temperature they are experiencing with our powerful smart phone application.

Combined with low cost yet powerful disposable sensors for air cargo crates, the Maven PT platform will provide your operation with a full dashboard of all of your client's pets while in transport. Quickly be able to see changes in condition with any pet using our Pet Card View (PCV) dashboard, and react to any situation with our powerful chat feature that can allow you to communicate with the owner on their smart phone. Provide that extra layer of service for your customers – door to door.

- Real-time location and ambient temperature the pet is experiencing
- Pre-set temperature thresholds for pets and alarming feature
- Drill down into any one pet using our PCV dashboard
- Full dot on a map real-time view of all the pets in your care
- Quick chat feature from owner to you and vice versa
- No need to recover the disposable sensor at the end of the trip
- Summary PDF of trip details automatically generated upon conclusion

We know safety is your top concern when assisting owners with the movement of their pets by air cargo. Provide your customers with the best service possible with the latest in safe pet travel technology with Maven PT.
