

VISIBILITY BEYOND THE OFFICE

Once you authorize the required health certificate for a pet's trip, give your client peace of mind by offering the new Maven Pet Tracker—a travel monitoring system that provides pet owners the comfort of knowing how their pet is handled

Moving or traveling by air with a pet can be stressful for the owners. Empower them with insight and visibility on their pet's location—along with the temperature the pet is experiencing with our powerful smart phone application.

Combined with our low-cost, disposable cellular sensor for air cargo crates, the Maven PT solution will provide your client and veterinarian practice with access to each pet's status. Quickly be able to see changes in condition with any pet using our Pet Card View (PCV) dashboard, and react to any situation with our powerful chat feature that allows you to communicate with the owner on their smart phone. Provide that extra layer of service for your clients—door to door.

- Track real-time location and ambient temperature the pet is experiencing
- Pre-set temperature thresholds for pets (warning alarm included)
- Quickly focus on any pet via our PCV dashboard
- Access full "dot on a map" real-time view of all pets under your care
- Quick chat feature connects you and pet owners
- No need to recover the disposable sensor at the end of the trip
- Summary PDF of trip details for inclusion in a pet's health records

Extend your services beyond the office and give your clients peace of mind when their pet's travel by air. Provide them the latest in safe pet travel technology with Maven PT.
